for customers that they want processing the almond themselves.

Mixed almond:

this grade includes small and big size.

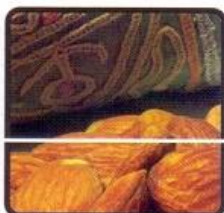

Sorted almond:

this grade includes big size.

Praline almond:

this grade includes small almonds that are suitable for in chocolate industry.

Welcome to Iran the suitable land for agricultural products.

Due to vast area and various climate of Iran each state in Iran at least has advantage for produce between three to ten agricultural products that they are exportable. Statistics of Iran's agricultural productions and export prove this fact .for example the latest report which has been issued by FAO, states Iran with producing about 170,000 tons pistachio and 800,000 tons date per year gains first rank in the world in this field and another report shows iran exports more than 1 milliard dollar nuts and dried fruits as a part of agricultural products in 2005.

Agricultural part plays an important role in Iranian life. This is true if we say in each Iranian family you can find a person that involve in harvesting - processing –distributing or trading of the agricultural products. Although Iran has a lot of improvement in other fields like industrial oil and gas, but Iranian know each city by agricultural crops that harvest in that city for example Rafsanjan is famous to pistachio city and the formal name of Iran's another city is Takestan that means vineyard in the English language.

Iran government pay attention a lot to this field because about Thirty percent of the labor forces work in agriculture producing like rice, grains, sugar, nuts and fruits.
